

LETTER FROM THE PRESIDENT

Dear Colleague:

HP Environmental, Inc. (HPE) was founded in January 1991 on the basic principles of attention to detail, professional collegueship with our clients and advancement of environmental sciences. Our success metric is client satisfaction, itself a function of long-term mutual trust. Whether the task is a single test request or a major mobilization, our commitment and principles remain the same.

If your project requires consultative support, HPE provides technical expertise in the core sciences of microbiology, chemistry and toxicology and we work in the diverse fields of industrial and environmental hygiene, site assessment and building science. Our field staff consist of fully trained and licensed technicians and technologists, Board Certified Industrial Hygienists (CIH), Public Health Professionals, and doctoral-level senior scientists and investigators who are tenacious and resilient and will respond quickly when the need arises.

If your project requires laboratory support, our laboratory staff is available to provide testing and technical advice and support any time you need it, day or night. We provide diverse testing capabilities, including air, water, soil, waste, surface and bulk sample matrixes. Testing procedures include the United States [Environmental Protection Agency](#) (EPA) profiles, the [American Society for Testing and Materials](#) (ASTM) methodologies, exposure analyses under both the [National Institute for Occupational Safety and Health](#) (NIOSH) and the [Occupational Safety and Health Administration](#) (OSHA) and indoor air quality profiles using state-of-the-art procedures for common and esoteric biological and chemical species.

As we prepare for the future, HPE continues to pursue applied research, keeping us sharp and working on the cutting edge of science. Our research interests focus on indoor air quality, aerobiology and toxicology with an emphasis on exposure and health risks. We share our knowledge in public and private forums, peer reviewed journals and publications and public outreach programs.

It has been a pleasure introducing you to HP Environmental. As you can see, we take great pride in our work and our company. Whether you are an old friend or a prospective client, we look forward to the opportunity of working together soon. You can learn more about our technical capabilities, business objectives and consulting and laboratory services on our website, where I trust you will come away with a sense of how we can work together.

Sincerely,

Piotr Chmielinski
